The information disclosure statements filed August 17, 2004 and March 19, 2004 has been considered and have been made of record.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Litt et al (USP 6,586,561).

Litt et al discloses rigid rod conducting copolymers, the sulfonated polyimide polymers incorporate bulky monomers, the polymers have a liquid crystalline structure and exhibit high conductivity, high water uptake and water stability over a range of relative humidities and temperatures the polymers are particularly adapted for use as a polymer electrolyte membrane in fuel cells that anticipates the claimed polymer electrolyte comprising a sulfonated product of a polymer. See Abstract; cols. 1-2, et seq.; col. 3-10 ; Claims 1-72.

Litt teaches at col. 12, lines 24-58, 59-60 and col. 13, lines 1-15; additional related polymers such as those defined in the general formula Structure II and , E is preferably a dianhydride, more preferably naphthalene tetracarboxy dianhydride or

perylene tetracarboxy dianhydride and most preferably 1,4,5,8 tetra carboxy naphthalene dianhydride. F is preferably a sulfonic acid containing diamine more preferably an aromatic sulfonic acid containing diamine, more preferably benzidine 2,2'disulfonic acid.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. These references are cited to show the state of the art of polyesters, polymer composition, proton conducting polymers and halogenated aromatic compounds: Goto, Akita, Soczka-Guth and Yamanaka.
